The Brilliance of Relevé Design

189 allium pendant

To understand the brilliance of **Relevé Design** (pun intended), I think it is important to understand some of the differences between recycling, repurposing and upcycling. Relevé explains this as the following:

Recycling: downgrades the properties of a material (also referred to as “downcycling”). The material weakens each time it is recycled.

Repurposing: is not always eco-friendly because it uses new and/or usable things

Upcycling: Only uses unwanted/discarded materials

Designer Bao Khang Luu takes upcycling to another level with his unique lighting creations. “In our case, we save six-pack rings from being dumped into a landfill or downcycled into low quality plastic, and we make them into new, fabulous lighting.”

The ethereal pendants are assigned names with numbers. The numbers refer to the amount of six pack rings used to make the lamps.
